(Received 23 March 2010; accepted 19 April 2010)

Abstract A new replacement name, *Zehntneriana*, is proposed for *Zehntneria* Takeda, 1972 (Crustacea, Decapoda, Pilumnidae), which had been preoccupied by *Zehntneria* Brunner von Wattenwyl, 1907 (Insecta, Orthoptera, Phasmidae).

Key words: *Zehntneria*, replacement name, Crustacea, Decapoda, Brachyura, Pilumnidae.

Takeda (1972, p. 35) established a new pilumnid crab genus, *Zehntneria* Takeda, 1972, for three species from the Japan and Indonesia, *Z. amakusae* (Takeda et Miyake, 1969), *Z. miyakei* Takeda, 1972, and *Z. villosa* (Zehntner, 1894) (type species by original designation). A fourth species, *Z. novaeinsulicola*, was later described by Takeda and Kurata (1977) from Japan. Ng (1987, p. 99) referred the genus to the subfamily Rhizopinae Stimpson, 1858, in the Pilumnidae, and commented on its similarities with the poorly known *Pseudolitochira* Ward, 1942 (see also Ng et al., 2008).

Brunner von Wattenwyl (1907, p. 233), however, had established *Zehntneria* for an African genus of stick insects (Orthoptera, Phasmidae) with three new species, *Z. desciscens*, *Z. secundaria* and *Z. mystica*. Otte and Brock (2005) subsequently designated *Z. mystica* Brunner von Wattenwyl, 1907, as the type species of the genus. This genus name is still in use. *Zehntneria* Brunner von Wattenwyl, 1907, is thus a senior homonym of *Zehntneria* Takeda, 1972.

To resolve the homonymy, we hereby propose a replacement name *Zehntneriana* for the

brachyuran *Zehntneria* Takeda, 1972. The type species of *Zehntneriana* remains as *Ceratoplax villosa* Zehntner, 1894, and the gender of the genus is feminine.

Acknowledgements

We are grateful to Tony Rees (Manager, Divisional Data Centre, CSIRO Marine and Atmospheric Research, Australia) for highlighting this problem to us, and to Martyn Low for help with the bibliographic work needed to help resolve this.
