PREFACE

Taxonomic studies on diatoms from Japanese Islands have a short history, beginning with several European diatomists (Ehrenberg 1854, Brun and Tempère 1889, Pantocsek 1892 and Meister 1913-4). Japanese diatomists became active in the taxonomy of diatoms after World War II. Recently, many Japanese diatomists have been working in taxonomical, ecological and environmental fields. Two Japanese monographs were recently published (Watanabe et al. 2005 and Kobayasi et al. 2006).

Many endemic taxa have been describing from Japan, and more study is required to understand the causes of this endemism.

This exsiccata set, made from Japanese freshwater microalgal specimens, is issued by the National Museum of Nature and Science. The first fascicle comprises 20 slides. Future fascicles will be issued at irregular intervals, in series of 20.

I am grateful to Dr. Toshiharu Watanabe for allowing use of his collection in TNS for this exsiccata.

If there are any problems experienced using this exsiccata, please contact me. I will send another slide. I am always pleased to receive comments and suggestions.

CITATION

Fasc. I (nos. 1-20)

18 May 2007

Slides in this exsiccatum set are prepared from original material housed in the Department of Botany, National Museum of Nature and Sciences (TNS). Most of the raw material, collected by T. Watanabe, had been treated by K. Asai using hot sulfuric acid and added potassium dichromate. Other samples have been treated by A. Tuji, using nitric acid. Permanent slides are mounted in Zrax (Microlife Services, Somerset).

Micrographs are taken using differential interference contrast (DIC) microscope (Axiophoto, Zeiss, Jena, Germany) and Charge Couple Device (CCD) camera (LU135M, Lumenera corp., Ottawa), and magnified 2000 times.

The taxa in this catalogue have been chosen from the most common on the slides. Others do exist on the slides.

All taxa in this catalogue have been identified by A. Tuji.

Ecological information relevant to Japan is referred from Watanabe et al. (2005). The terms, saproxenous, indifferent and saprophilous, are defined by Asai (1995) using a statistic classification for their index (DAIpo: Diatom Assemblage Index to organic water pollution).

Diat. Typ. Fr. Hust. pl. 68. f. 1-9. 1987.

Ecology: saproxenous, pH-circumneutral.

Diadesmis paracontenta Lange-Bert. & Werum in Lange-Bertalot & Genkal, Iconogr. Diatomol. **6**:

41. pl. 21. f. 2-5. 1999.

(Figs 16-18)

Nos. 014

Shimoyu spring, Totsugawa hot spa, Nara Pref., Japan.

[33°56' N, 135°45' E from a map]

pH: 8.6, WT: 26.

Date: 1/iii/1994.

Coll. T. Watanabe (duplicate of TNS-AL-TW-10870 in TNS).

Achnanthidium saplophilum (H.Kobayasi et Mayama) Round et Bukhtiyarova, Diat. Res. **11**: 349.

1996.

≡ *Achnanthes minutissima* var. *saprophila* H.Kobayasi et Mayama, Jap. J. Phycol. **30**: 195. f. 2a-h.

1982.

(Figs 1-15)

Ecology: saprophilous, alkaliphilous.

Nitzschia amphibia Grunow, Verh. K. Zool.-Bot. Ges. Wien **12**: 574. pl. 12. f. 23. 1862.

(Figs 16-18)

Ecology: saprophilous, alkaliphilous.

Nitzschia microcephala Grunow, K. Svenska Vet.-Akad. Handl., ser. 4. **17**: 96. 1880.

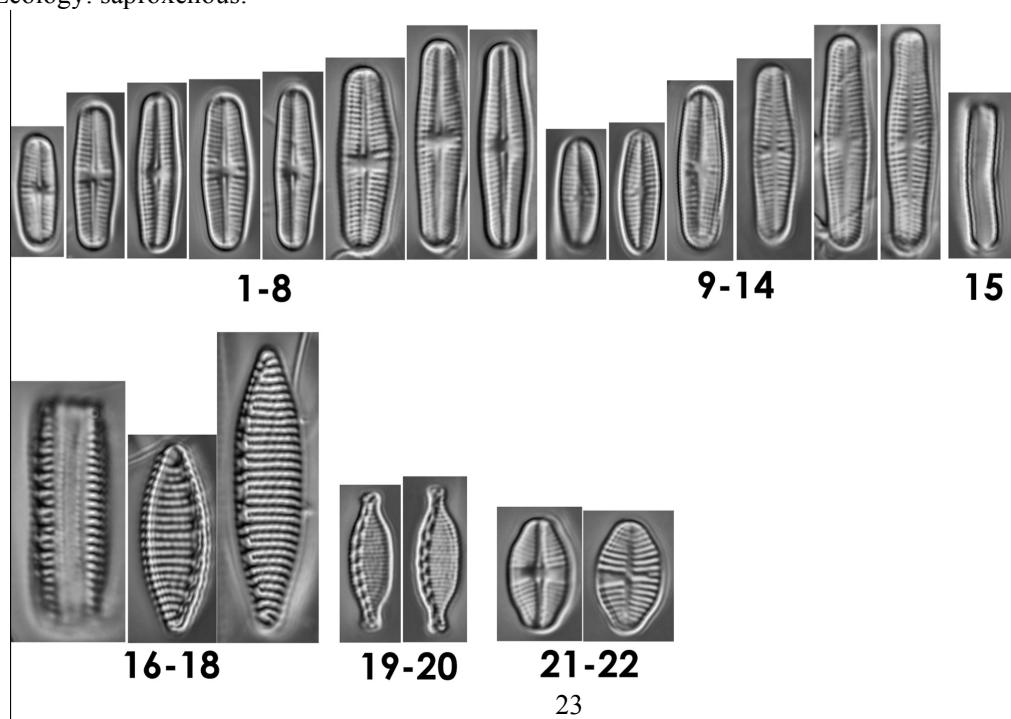

(Figs 19-20)

Ecology: saproxenous, alkaliphilous.

Psammothidium subatomoides (Hust.) Bukhtiy. et Round, Diat. Res. **11**: 13. 1996.

(Figs 21-22)

Ecology: saproxenous.

Nos. 015

Taishi-ido, Takatori, Nara Pref., Japan.

[$34^{\circ}27'N, 135^{\circ}47'E$ from a map]

pH: 6.8.

Date: 13/ix/1991.

Coll. T. Watanabe (duplicate of TNS-AL-TW-12292 in TNS).

Achnanthidium catenatum (Bílý et Marvan) Lange-Bert., Iconogr. Diatomol. **6**: 277. 1999.

≡ *Achnanthes catenata* Bílý et Marvan, Preslia **31**: 34. pl. 8, f. 1-4. 1959.

Type examination using LM: Lange-Bertalot & Krammer, Bibl. Diat. **18**: 37. pl 55. f. 30-32. 1989.

(Figs 1-11)

Luticola goeppertia (Bleisch in Rabenh.) D.G.Mann in Round, R.M.Crawford & D.G.Mann,
Diatoms 670. 1990.

≡ *Stauroneis goeppertia* Bleisch in Rabenh., Alg. Europ. 1183. 1861.

(Figs 12-13)

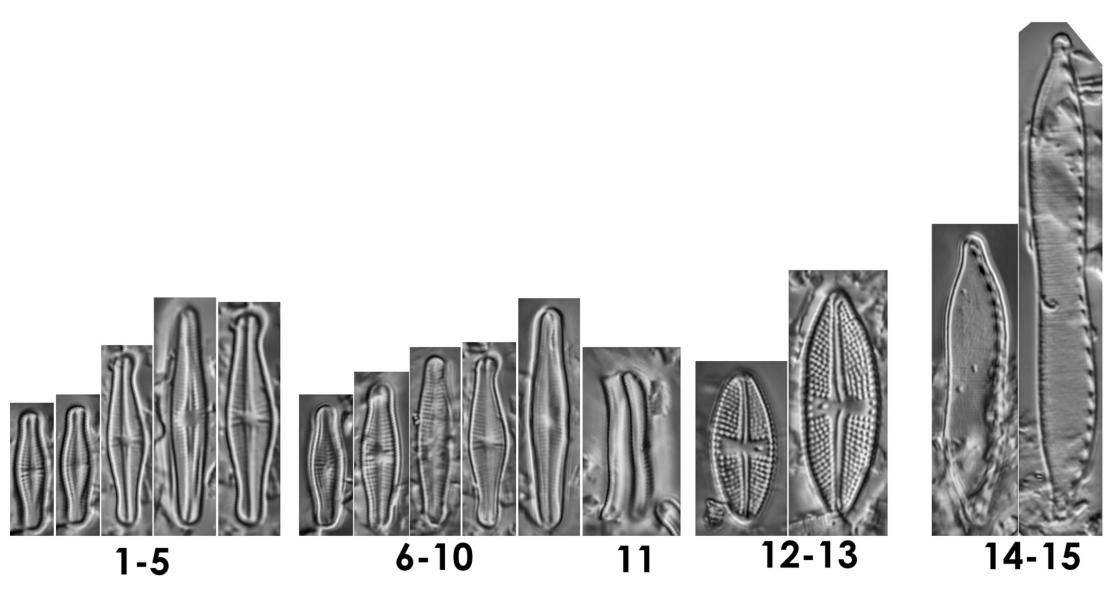

Taxonomy: Though Mann (1990) cited “*Navicula mutica* var. *goeppertia* M.Bleisch 1861” not
Stauroneis goeppertia Bleisch 1861, this combination is valid under ICBN.

Ecology: saprophilous, alkaliphilous.

Nitzschia brevissima Grunow in Van Heurck, Syn. Diat. Belg. pl. lxvii. f. 4. 1881.

(Figs 14-15)

Ecology: indifferent, pH-circumneutral.

Nos. 016

Kagami-ike pond, Nara Pref., Japan.

[$34^{\circ}41' \text{N}$, $135^{\circ}50' \text{E}$ from a map]

Date: 2/vii/1976.

Coll. T. Watanabe (duplicate of TNS-AL-TW-10350 in TNS).

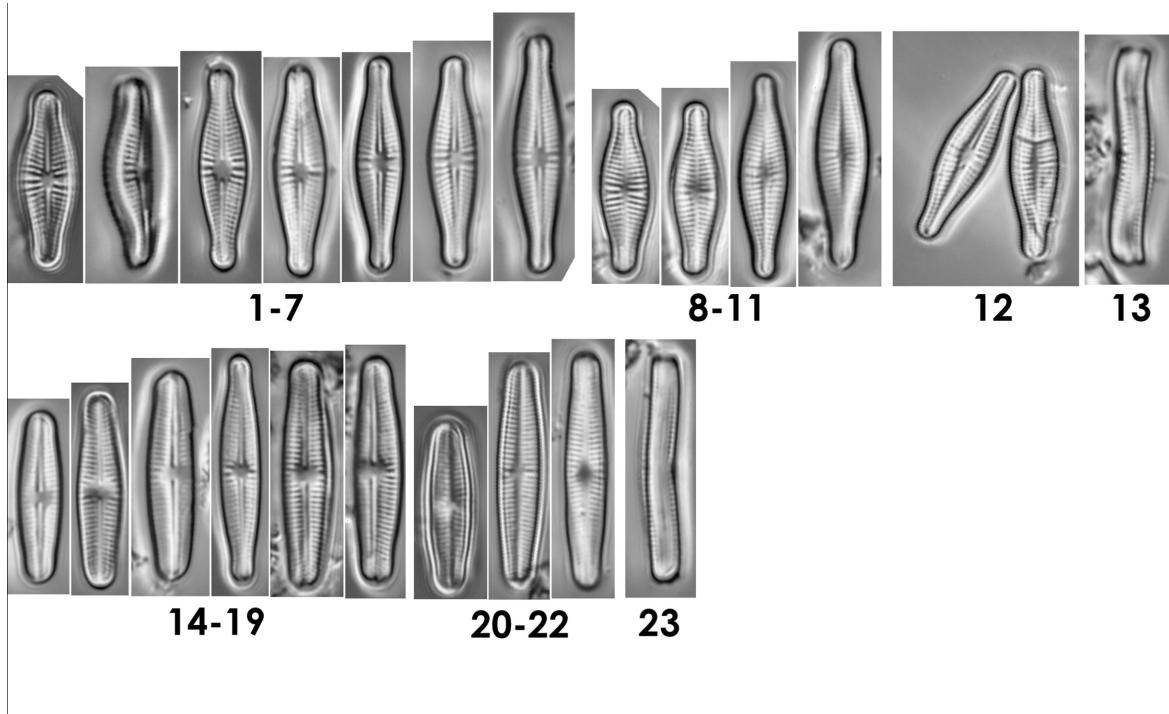

Achnanthidium microcephalum Kütz, Bacill. 75. pl. 3. f. XIII, XIX. 1844.

(Figs 1-13)

Achnanthidium minutissimum (Kütz.) Czarn., Proc. Int. Diat. Symp. 11: 157. 1994.

(Figs 14-23)

Ecology: Since the taxonomy of *A. minutissimum* species complex has been confusing, the ecology of each taxon is not clear. However, the ecology of each taxon seems to be different, and it should be very important to study the ecological difference of each taxon.

Nos. 017

A spring in Tsubokawake house, Maruoka, Fukui Pref., Japan

[36°09' N, 136°20' E from a map]

pH: 6.4, WT: 7.2.

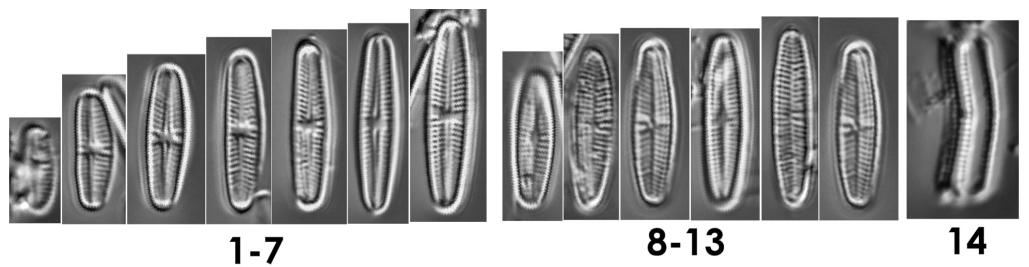

Date: 4/iv/1994.

Coll. T. Watanabe (duplicate of TNS-AL-TW-10878 in TNS).

Achnanthidium lineare W.Sm., Ann. & Mag. Nat. Hist. ser. 2. **15**: 8. pl. I. f. 9. 1855.

Lectotype: Coll. W. Smith, im BM 445 aus Lasswade, deisgnated by Lange-Bertalot in Krammer and Lange-Bertalot, Süßw.-flora Mitteleur. **2/4**: taf. 32. f. 10-17. 1991; micrographs also in Lange-Bertalot & Ruppel, Alg. Stud. f. 103-112. 1980.

(Figs 1-14)

Nos. 018

Ryujin hot spa, Totsugawa, Nara Pref., Japan.

[$33^{\circ}58'N, 135^{\circ}34'E$ from a map]

pH: 8.5, EC: 1600, WT: 40.

Date: 26/iii/1996.

Coll. T. Watanabe (duplicate of TNS-AL-TW-12435 in TNS).

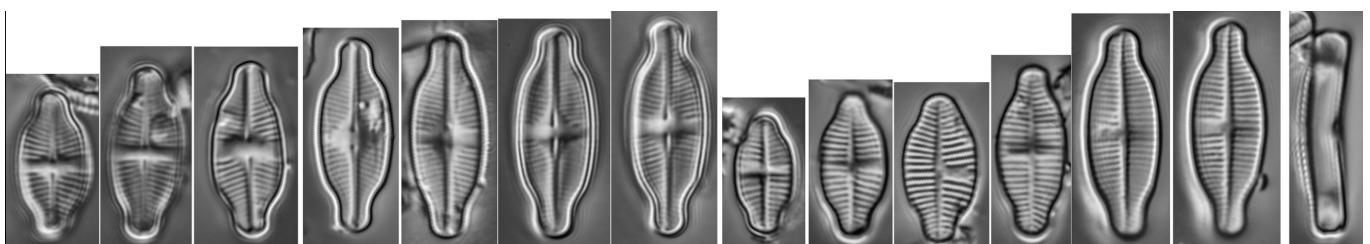

Achnanthidium exile (Kütz.) Heib., Conspl. Diat. Dan. 119. 1863.

≡ *Stauroneis exilis* Kütz., Bacill. 105. pl. 30, f. 21. 1844.

≡ *Achnanthidium exiguum* (Grunow) Czarn., Proc. Int. Diat. Symp. 11: 157. 1994.

(Figs 1-14)

Ecology: saproxenous, rare.

1-7

8-13

14

Nos. 019

R. Hyogo, Fukui Pref., Japan.

pH: 6.6, WT: 9.0.

Date: 27/xi/1994.

Coll. T. Watanabe (duplicate of TNS-AL-TW-12596 in TNS).

Navicula gregaria Donk., Quart. J. Microsc. Sci. new ser. 10. pl. I. f. 10. 1861.

(Figs 1-6)

Type locality: Chibburn Mouth, Druridge Bay, Lyne Mouth, Blyth Harbour, Tynemouth.

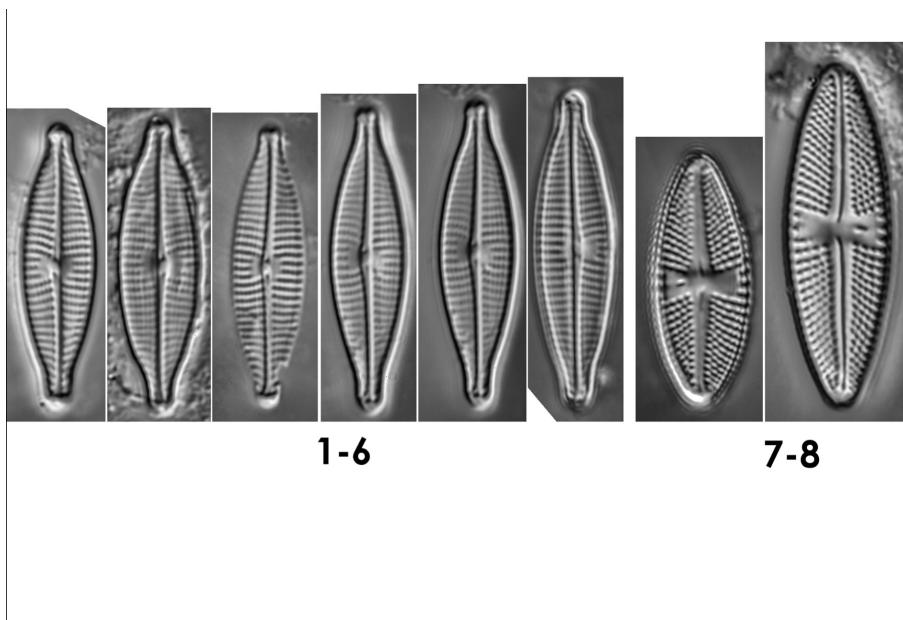

Lectotype: BM11987 (Chibburn Mouth), designated by R.M.Patrick in Patrick & Reimer, Diat.

United States 467-468; micrographs in Cox, Diat. Res. 10: 109. f. 39. 1995.

Ecology: indifferent, alkaliphilous.

Luticola goeppertiana (Bleisch in Rabenh.) D.G.Mann in Round, R.M.Crawford & D.G.Mann,
Diatoms 670. 1990.

(Figs 7-8)

Nos. 020

Nagasawa-ryuro, outflow of hot spa, Izu-oshima Isl., Tokyo Pref., Japan.

[$34^{\circ}45'15.6''$ N, $139^{\circ}21'08.2''$ E]

EC: over 2000, pH: 9.5.

Date: 30/i/2005.

Coll. A. Tuji (duplicate of TNS-AL-55526m in TNS).

Nitzschia perspicua Cholnoky, Hydrobiol. **16**: 262. f. 36. 1960.

(Figs 1-6)

Type: Coll. Cholnoky, Swarkops 14A, no. 201/4009, Sudafricka, examined by Krammer & Lange-Bertalot, Süßw.-flora Mitteleur. **2/2**: taf. 80. f. 1-2. 1988.

Entomoneis paludosa (W.Sm.) Reimer in Patrick & Reimer, Monogr. Acad. Nat. Sci. Philadelphia **13**: 4. 1975.

(Fig. 7)
