E-mail: tomokuni@kahaku.go.jp

Abstract. Twenty-seven species of Rhyparochromidae in seven tribes and 20 genera are recorded from Sarawak, East Malaysia, on the basis of specimens housed in the Forest Research Centre (FRC), Kuching, Malaysia, and the National Museum of Nature and Science, Tokyo, Japan. Of these, nine species are new to Borneo, i.e., *Botocudo yasumatsui*, *Pactye elegans*, *Entisberus archetypus*, *Diniella sevosa*, *Pamerana scotti*, *Paromius piratoides*, *Stigmatonotum geniculatum*, *Tachytatus prolixicornis*, and *Elasmolomus pallens*, and seven species are new to Sarawak, i.e. *Clerada noctua*, *Pactye distincta*, *Heissodrymus magnus*, *Kanigara oculata*, *Horridipamera nietneri*, *Pamerarma ventralis*, and *Pseudopachybrachius guttus*. This result evidently shows an excessive insufficiency of inventory researches on this group not only in Sarawak but also in Borneo as a whole. A checklist of Rhyparochromidae for 57 species in eight tribes and 33 genera known from Borneo is also provided for further progress of the inventory.

Key words: Rhyparochromidae, Heteroptera, inventory, Sarawak, Borneo, Malaysia, new record, checklist.

Introduction

As a state of Malaysia Sarawak occupies the northwestern part of Borneo, the third largest and one of the biodiversity richest island in the world. But unfortunately, the biodiversity in Sarawak has been extinguished rapidly by interminable human activities such as industrial logging, expansion of tree and oil palm plantations, residential developments, and so on. Therefore inventory researches in this area are now become urgent subjects for better understanding of the biodiversity, and the “sustainable use of its components” (Convention on Biological Diversity, 1993) as well.

Taxonomical works on Sarawakian Rhyparochromidae are extremely scarce and only fragmental as summarized hereinafter. As far as I am aware, the first hemipterist who dealt with rhyparochromid species from Sarawak is Stål. He described *Pactye ciconia* and *Narbo longipes* in

1867 based on specimens collected in Sarawak by “Stevens” (cf. Scudder, 1977). Before the middle of 20th century, two British entomologists (Walker, 1872; Distant, 1906) added five species described from Sarawak: *Lygaeus dissimilis* Walker, 1872 (=*Dyakana dissimilis*), *Rhyparochromus alienus* Walker, 1872 (=*Neolethaeus alienus*), *Aphanus raja* Distant, 1906 (=*Neolethaeus descriptus* (Walker, 1872)), *Rhyparochromus nigritulus* Walker, 1872 (=*Pamerana nigritula*), and *Aphanus hewitti* Distant, 1906 (=*Elasmolomus hewitti*). After the World War II the taxonomical study was accelerated a little by several heteropterists such as Woodward (1963, 1979), Scudder (1969), Eyles (1973), Malipatil (1980, 1985), Slater & Woodward (1982), Slater (1983), Slater & Zheng (1985b), Malipatil & Woodward (1989), and most recently by Kondorosy (2006). Through these contributions 23 species in 17 genera has been known in Rhyparochromidae of Sarawak to date (see

Checklist in this paper).

Since 1998 I have carried out a series of inventory researches on Heteroptera (Tomokuni, 2005, 2008; Tomokuni & Ishikawa, 2008) in Sarawak. As a part of this research project, this paper deals with Rhyparochromidae from Sarawak based on the material in the collections of the Forest Research Centre (FRC, Fig. 1a, b, c), Sarawak Forestry Corporation, Kuching, Malaysia, and the National Museum of Nature and Science (NSMT), Tokyo, Japan, but no nomenclatural act is included herein. A checklist of Rhyparochromidae known from Borneo is also provided for further progress of the inventory.

Materials and Methods

All the material in FRC were collected in Lambir Hills National Park near Miri under a Japan-Malaysia cooperative project, “Canopy Biology Program (CBP)”, using UV light traps set on a tree tower at heights of 17, 25, 35, and 45 m. The material in NSMT were collected by myself in Kubah National Park, 20 km NW of Kuching, and Lambir Hills National Park under the projects “Biodiversity Inventory in the Western Pacific Region” conducted by the Museum in 2007–2009, and “Insect Inventory Project in Tropical Asia (TAIIV)” in 2001–2008 conducted by Prof. Osamu Yata of the Kyushu University, Fukuoka, Japan.

Fig. 1. Rhyparochromine collection in Sarawak, Malaysia. a, Forest Research Centre (FRC) in Kuching. b, a cabinet for Heteroptera specimens in FRC. c, a container of Rhyparochromidae in FRC.

No special technique is used for identifying rhyparochromid specimens.

List of Species

Family Rhyparochromidae

Subfamily Rhyparochrominae

Tribe Antillocorini

Botocudo yasumatsui (Hidaka, 1959)

Specimens examined. Lambir Hills National Park: 1♀, 8 Mar. 2002, M. Tomokuni. Matan Wildlife Center, Kubah National Park: 6♂ 2♀, 28 Nov. 1998, M. Tomokuni; 2♂ 3♀, 30 Nov. 1998, M. Tomokuni.

Distribution. Borneo (Sarawak: new record), Japan.

Note. This antillocorine species has been known only from Japan. It is most abundant in the Ryukyu Islands, the southernmost part of Japan. Specimens from Sarawak agree well with those from Japan in morphology. It is quite possible that this species is distributed widely in the area lying between Japan and Borneo.

Botocudo sp.

Specimens examined. Lambir Hills National Park: 35♂ 18♀, 20 Mar. 2009, M. Tomokuni; 5♂ 3♀, 23 Mar. 2009, M. Tomokuni.

Note. This species is very similar to *Botocudo yasumatsui*, but is distinguishable from the latter by smaller and narrower body with much strong luster, and rather strongly constricted pronotum.

Tribe Cleradini

Clerada noctua Distant, 1901

Specimens examined. Lambir Hills National Park: 1♂, 28 Aug.–1 Sep. 1992, CBP; 1♂, 22–26 Mar. 1993, CBP; 1♂, 19–20 July 1993, CBP; 1♀, 22–23 Nov. 1995, CBP; 1♀, 19–20 May 1996, CBP; 1♀, 9–10 Apr. 1997, CBP; 1♀, 4–5 July 1997, CBP; 2♂ 1♀, 15–16 Feb. 2002, CBP.

Distribution. Borneo (Sarawak: new record, Sabah).

Note. This species was described from

Sabah by Distant (1901) and is here recorded from Sarawak for the first time.

Pactye ciconia Stål, 1867

Specimens examined. Lambir Hills National Park: 1♀, 28 Aug.–1 Sep. 1992, CBP; 1♂, 25–28 Sep. 1992, CBP; 1♂, 22–26 Dec. 1992, CBP; 1♀, 18–22 June 1993, CBP; 1♂, 15–16 Sep. 1993, CBP; 1♀, 12–13 May 1994, CBP; 1♂, 11–12 Feb. 2002, CBP; 1♀, 8 Mar. 2002, M. Tomokuni; 1♂, 15–16 May 2002, CBP; 2♀, 12–13 Aug. 2002, CBP; 1♂, 23 Mar. 2009, M. Tomokuni. Sungai Liam near Lambir Hills National Park: 1♀, 2 Feb. 2008, M. Tomokuni.

Distribution. Borneo (Sarawak).

Pactye distincta Scudder, 1978

Specimens examined. Lambir Hills National Park: 1♀, 1 Mar. 1995, CBP.

Distribution. Borneo (Sarawak: new record, Sabah).

Note. This species was described from Sabah based on the two female specimens (cf. Scudder, 1978) and is newly recorded from Sarawak herein.

Pactye elegans (Breddin, 1901) (Fig. 2a)

Specimens examined. Lambir Hills National Park: 1♂, 22–26 Mar. 1993, CBP; 2♂, 22–26 Apr. 1993, CBP; 1♀, 19–20 July 1993, CBP; 1♀, 29–30 Jan. 1995, CBP; 1♀, 12–13 Aug. 2002, CBP.

Distribution. Sumatra, Borneo (Sarawak: new record).

Note. This species was originally described from Sumatra under a monotypic new genus *Henricodohrnia* Breddin, 1901, but the genus was synonymized with *Pactye* by Malipatil (1983). It is first recorded here from Borneo (Sarawak).

Tribe Drymini

Appolonius sp.

Specimens examined. Sungai Liku near Lambir Hills National Park: 1♂, 1 Feb. 2008, M. Tomokuni.

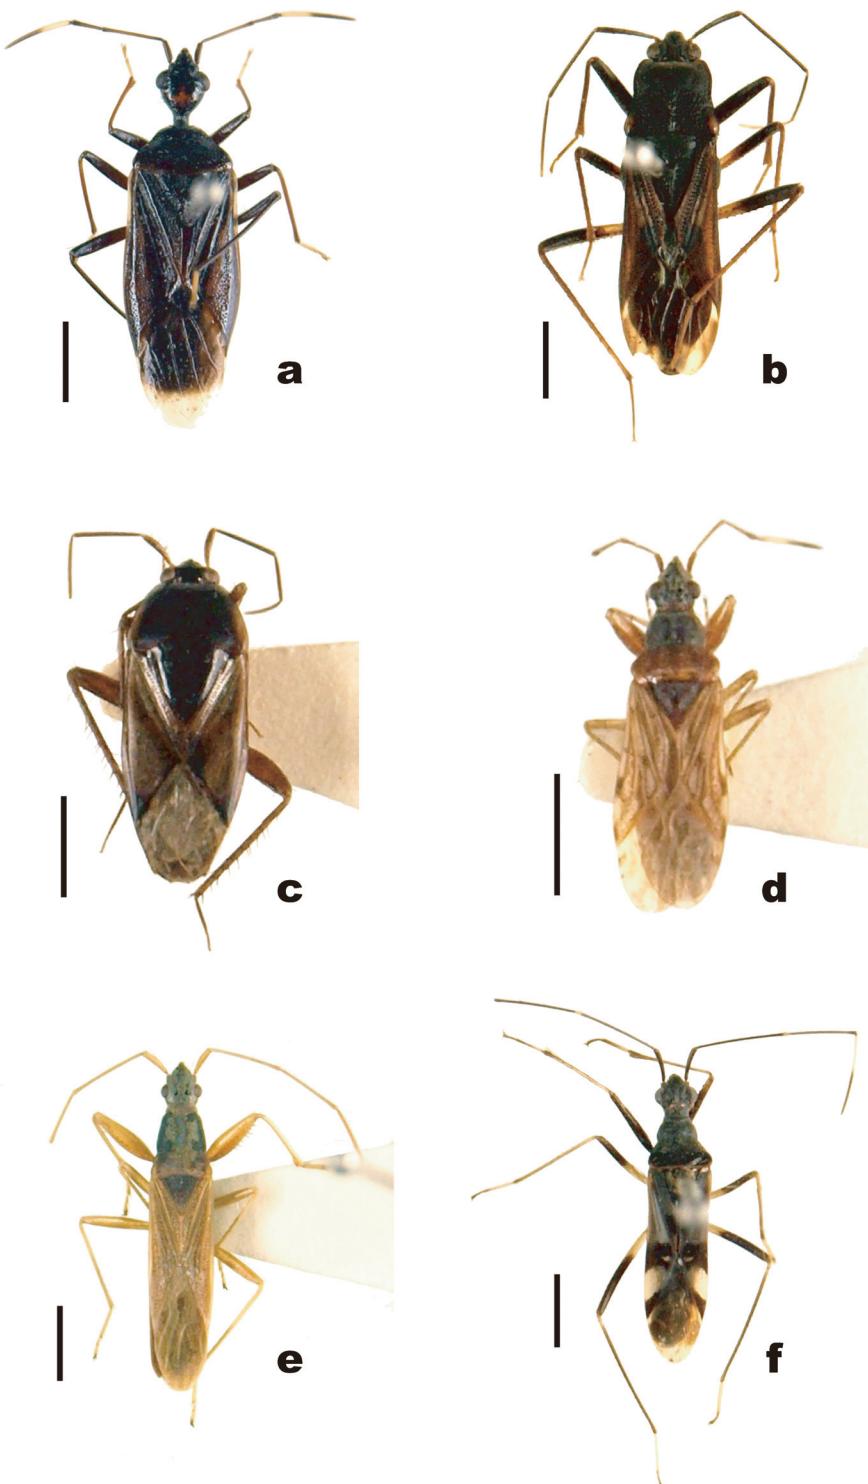

Fig. 2. Some Rhyparochromidae new to Borneo or new to Sarawak. a, *Pactye elegans* (Breddin, 1901), female, 19–20 July 1993, CBP. b, *Heissodrymus magnus* Kondorosy, 2006, male, 22–26 Apr. 1993, CBP. c, *Kanigara oculata* Scudder, 1969, female, 12–13 May 2002, CBP. d, *Pamerana scotti* (Distant, 1901), female, 11–15 May 2002, CBP. e, *Paromius piratoides* (Costa, 1864), male, 3 Dec. 1998, at light, M. Tomokuni. f, *Tachytatus prolixicornis* Bergroth, 1918, female, 30–31 May 1995, CBP. Scales: 2 mm.

Note. This species is most similar to *Appoloniuss crassus* Distant, 1906 described from Sri Lanka, but differs from it in the larger body (4 mm long) and the larger and more conspicuous whitish marking on the membran. No species of the genus *Appoloniuss* has been known from Borneo to date.

Borneodrymus gracilis Kondorosy, 2006

Specimens examined. Lambir Hills National Park: 2♂ 1♀, 25–28 Sep. 1992, CBP; 1♂, 23–27 Nov. 1992, CBP; 1♂, 19–23 May 1993, CBP.

Distribution. Borneo (Sarawak, Sabah, Brunei).

Entisberus archetypus Distant, 1903a

Specimens examined. Lambir Hills National Park: 1♀, 22–26 Apr. 1993, CBP; 2♂ 1♀, 19–23 May 1993, CBP; 1♂, 18–22 June 1993, CBP; 1♀, 8 Mar. 2002, M. Tomokuni; 1♂ 1♀, 12–13 Aug. 2002, CBP; 1♂, 20 Mar. 2009, M. Tomokuni.

Distribution. Sri Lanka, Borneo (Sarawak: new record), Philippines (Mindanao, Luzon).

Note. This species was described originally from Sri Lanka (as Ceylon, Distant, 1903a) and later recorded from the Philippines by Bergroth (1918). The new record from Borneo (Sarawak) suggests that this species may be distributed widely in South and Southeast Asia.

Heissodrymus magnus Kondorosy, 2006 (Fig. 2b)

Specimens examined. Lambir Hills National Park: 3♀, 25–28 Sep. 1992, CBP; 1♂, 22–26 Dec. 1992, CBP; 2♂ 3♀, 22–26 Apr. 1993, CBP; 2♂, 18–22 June 1993, CBP; 1♀, 17–21 July 1993, CBP; 1♀, 16–20 Aug. 1993, CBP; 1♀, 15–16 Jan. 1994, CBP; 2♂, 12–14 Sep. 1996, CBP.

Distribution. Borneo (Sarawak: new record, Brunei, Kalimantan).

Note. This species was recently described from Brunei and Kalimantan, and is here recorded from Sarawak as well.

Kanigara oculata Scudder, 1969 (Fig. 2c)

Specimens examined. Lambir Hills National Park: 1♀, 23–27 Nov. 1992, CBP; 1♀, 22–26 Dec. 1992, CBP; 2♀, 12–13 May 2002, CBP; 1♂, 15–16 May 2002, CBP; 1♂ 1♀, 12–13 Aug. 2002, CBP.

Distribution. Malay Peninsula (Johore), Sumatra, Borneo (Sarawak: new record, Brunei).

Note. From current distributional knowledge this species seems to belong one of the typical elements of the Malayan Subregion. It is new to Sarawak.

Kanigara punctata Scudder, 1969

Specimens examined. Lambir Hills National Park: 1♀, 25–28 Sep. 1992, CBP; 1♀, 22–26 Dec. 1992, CBP; 1♂, 22–26 Apr. 1993, CBP; 2♂ 2♀, 19–23 May 1993, CBP; 1♂, 16–17 Mar. 1994, CBP; 1♀, 14–15 May 2002, CBP; 1♀, 12–13 Aug. 2002, CBP.

Distribution. Sumatra, Borneo (Sarawak, Sabah), Sulawesi, Philippines (Palawan, Luzon, Leyte).

Tribe **Lethaeini**

Diniella glabrata (Stål, 1874)

Specimens examined. Lambir Hills National Park: 1♂, 22–26 Apr. 1993, CBP; 4♂, 19–23 May 1993, CBP; 1♀, 18–22 June 1993, CBP; 1♀, 23 Mar. 2009, M. Tomokuni.

Distribution. Australia, India (as *D. insignis* Distant, 1918), Borneo (Sarawak), Philippines.

Note. More than a century later from Stål's original description of this species from the Philippines, Woodward (1979) recorded it from Sarawak, as well as Australia, with the synonymization of *D. insignis* with this Stål's species.

Diniella sevosa (Distant, 1901)

Specimens examined. Lambir Hills National Park: 1♀, 13–14 May 2002, CBP; 2♂ 1♀, 23 Mar. 2009, M. Tomokuni.

Distribution. Sri Lanka, Borneo (Sarawak: new record).

Note. The Sarawakian specimens agree well with Distant's (1901) original description and a photograph of the lectotype that I took at the Natural History Museum, London, in 1995. This species is new to Borneo.

Neolethaeus alienus (Walker, 1872)

Specimens examined. Lambir Hills National Park: 1♀, 24–27 Oct. 1992, CBP; 1♀, 22–26 Dec. 1992, CBP.

Distribution. Borneo (Sarawak).

Tribe *Myodochini*

Horridipamera nietneri (Dohrn, 1860)

Specimens examined. Lambir Hills National Park: 3♀, 21–25 Feb. 1993, CBP; 1♀, 22–26 Apr. 1993, CBP; 1♂, 23 Sep. 1995, CBP; 3♂8♀, 3–6 Dec. 1998, at light, M. Tomokuni; 1♀, 11–12 Feb. 2002, CBP; 1♂1♀, 22 Mar. 2009, at light, M. Tomokuni.

Distribution. As summarized by Slater and Zheng (1984) this species is distributed widely in almost whole Oriental Region, as well as wide parts of Australia and the Pacific Islands. In Borneo it has been found only from Sabah and is here newly recorded from Sarawak.

Pamerana sarawakensis Malipatil, 1980

Specimens examined. Lambir Hills National Park: 3♀, 21–25 Feb. 1993, CBP; 1♀, 22–26 Apr. 1993, CBP; 1♀, 14–15 May 2002, CBP; 1♀, 10–11 Aug. 2002, CBP.

Distribution. Borneo (Sarawak).

Pamerana scotti (Distant, 1901) (Fig. 2d)

Specimens examined. Lambir Hills National Park: 2♂, 21–25 Feb. 1993, CBP; 1♀, 19–20 July 1993, CBP; 2♂1♀, 11–15 May 2002, CBP.

Distribution. India, Sri Lanka, Myanmar, Borneo (Sarawak: new record), Japan.

Note. This species was originally described from Japan and is newly recorded from Borneo (Sarawak) herein.

Pamerarma ventralis (China, 1930)

Specimens examined. Lambir Hills National Park: 1♂1♀, 21–25 Feb. 1993, CBP; 2♂3♀, 22–26 Apr. 1993, CBP; 1♂, 19–23 May 1993, CBP; 1♀, 13–14 Mar. 1994, CBP; 2♂, 14–15 May 2002, CBP. Matan Wildlife Center, Kubah National Park: 1♂, 28 Nov. 1998, M. Tomokuni.

Distribution. This Samoan species is known to occur widely in the Pacific area including Mariana, Caroline, Tubuai, Samoa, Fiji, and Cook Islands, and also Australia (Queensland), New Guinea, Borneo (Sabah), Malay Peninsula, and Japan (cf. Slater, 1964; Barber, 1958; Malipatil, 1978). But, from Sarawak it is first recorded herein.

Note. This species was referred to as *Pachybrachius chinai* Usinger, 1946, a junior synonym of *Pamerarma ventralis*, in some of the previous records (cf. Malipatil, 1978). In Borneo it has been known only from Sabah (Malipatil, 1978), but is newly recorded also from Sarawak herein.

Paromius piratoides (Costa, 1864) (Fig. 2e)

Specimens examined. Lambir Hills National Park: 2♂, 3 Dec. 1998, at light, M. Tomokuni.

Distribution. Thailand, Borneo (Sarawak: new record), Sulawesi, Philippines, Caroline and Mariana Islands.

Note. This tropical species is first recorded from Borneo (Sarawak) herein. The specimens from Sarawak agree well with those from the Philippines, the type locality of this species.

Pseudopachybrachius guttus (Dallas, 1852)

Specimens examined. Lambir Hills National Park: 1♂, 21–25 Feb. 1993, CBP; 2♀, 22–26 Apr. 1993, CBP; 1♀, 19–23 May 1993, CBP; 1♂2♀, 3–6 Dec. 1998, at light, M. Tomokuni; 1♀, 12–13 May 2002, CBP. Sungai Liam near Lambir Hills National Park: 1♂, 2 Feb. 2008, M. Tomokuni.

Distribution. This myodochin bug is widely distributed in the Oriental, Australasian, and southern part of Palearctic Regions (cf. Slater, 1964; Barber, 1958; Malipatil, 1978), but from Sarawak it is first recorded herein.

Note. *Pachybrachius pacificus* (Stål, 1874) known from many Pacific islands was synonymized with this species (Malipatil, 1978).

Stigmatonotum geniculatum (Motschulsky, 1863)

Specimens examined. Lambir Hills National Park: 1♂, 23 Mar. 2009, M. Tomokuni. Sungai Liam near Lambir Hills National Park: 1♂ 2♀, 2 Feb. 2008, M. Tomokuni. Matan Wildlife Center, Kubah National Park: 1♂ 1♀, 30 Nov. 1998, M. Tomokuni.

Distribution. Similarly to the preceding species *S. geniculatum* shows wide distribution almost throughout tropical and subtropical areas of the Old World, and extends its range northward into China and Japan (Slater & Zheng, 1985a), but there was no actual record from Borneo previously.

Tribe Ozophorini

Tachytatus prolixicornis Bergroth, 1918 (Fig. 2f)

Specimens examined. Lambir Hills National Park: 2♂ 2♀, 22–26 Apr. 1993, CBP; 1♂, 19–23 May 1993, CBP; 1♀, 30–31 May 1995, CBP; 1♀, 20 May 2009, M. Tomokuni.

Distribution. Borneo (Sarawak: new record).

Note. This monobasic genus *Tachytatus* was described from the Philippines with *T. prolixicornis* as the type species (Bergroth, 1918). It is also record here from Borneo (Sarawak) for the first time.

Tribe Rhyparochromini

Dieuches major Eyles, 1973

Specimens examined. Lambir Hills National Park: 1♀, 14–15 June 1996, CBP; 1♀, 13–14 Dec. 1996, CBP.

Distribution. Borneo (Sarawak).

Note. Among this extremely diverse genus *Dieuches* only two species, *D. major* and *D. japonicus* Hidaka & Eyles, 1968, has been known to occur in Borneo. It is quite possible that some other species inhabit there.

Elasmolomus hewitti (Distant, 1906)

Specimens examined. Lambir Hills National Park: 1♂, 28 Sep.–1 Oct. 1992, CBP; 1♂, 14–15 May 2002, CBP; 1♂, 12–13 Aug. 2002, CBP.

Distribution. Borneo (Sarawak).

Elasmolomus pallens (Dallas, 1852)

Specimens examined. Lambir Hills National Park: 1♀, 22–26 Apr. 1993, CBP; 1♀, 19–20 July 1993, CBP; 1♂, 11–12 May 2002, CBP.

Distribution. This species has very wide distributional range in the tropical, subtropical, and a part of temperate regions in Africa, Asia, and Pacific islands (cf. Slater, 1964). Despite its wide distribution, no previous record from Borneo can be found.

Note. This species has long been known as *Elasmolomus sordidus* (Fabricius, 1787). *Elasmolomus pallens* is a replacement name of *E. sordidus* that was preoccupied by *Cimex sordidus* Goeze, 1778 and *C. sordidus* Thunberg, 1783 (cf. Slater & O'Donnell, 1995).

Narbo longipes Stål, 1867

Specimens examined. Lambir Hills National Park: 1♂, 25–28 Sep. 1992, CBP; 1♂, 21–25 Feb. 1993, CBP; 1♀, 22–26 Apr. 1993, CBP; 2♀, 29–30 Jan. 1995, CBP; 3♂, 9–10 May 1997, CBP.

Distribution. Myanmar, Malay Peninsula, Borneo (Sarawak).

Discussion

As Sarawakian Rhyparochromidae a total of 27 species in seven tribes and 20 genera are recorded herein on the basis of specimens in two series of collections mentioned previously. Of these, excluding two unidentified species, nine species are new to Borneo, i.e. *Botocudo yasumatsui*, *Pactye elegans*, *Entisberus archetypus*, *Diniella sevosa*, *Pamerana scotti*, *Paromius pira-*
toides, *Stigmatonotum geniculatum*, *Tachytatus prolixicornis*, and *Elasmolomus pallens*, and seven species are new to Sarawak, i.e. *Clerada noctua*, *Pactye distincta*, *Heissodrymus magnus*,

Kanigara oculata, *Horridipamera nietneri*, *Pamerarma ventralis*, and *Pseudopachybrachius guttus*. As a result 57 species in eight tribes and 33 genera become known in the rhyparochromid fauna of Borneo (see Checklist in this paper). These numbers evidently show an excessive insufficiency of inventory researches on this group not only in Sarawak but also in Borneo as a whole. In fact a number of specimens in the present collections still remain unidentified and many of them are presumed to belong undescribed species. The present material was collected only in restricted areas in Sarawak, Kubah National Park and Lambir Hills National Park. Extension of research areas, particularly to mountainous areas, is essential toward a full inventory of this group in Sarawak.

Checklist of the Rhyparochromidae from Borneo

Subfamily Rhyparochrominae

Tribe Antillocorini

- Genus *Baeocoris* Slater, 1983
molliculus Slater, 1983
 Sarawak, Sabah: Slater (1983)
woodwardi Slater, 1983
 Sarawak: Slater (1983)
- Genus *Botocudo* Kirkaldy, 1904
flavicornis (Signoret, 1880) (*Tropistethus*)
 Borneo: Lethierry & Severin (1894).
yasumatsui (Hidaka, 1959) (*Cligenes*)
 Sarawak: present paper
- Genus *Lethaeastroides* Malipatil & Woodward, 1989
sarawakensis Malipatil & Woodward, 1989
 Sarawak: Malipatil & Woodward (1989).
- vooni* Malipatil & Woodward, 1989
 Sarawak: Malipatil & Woodward (1989).

Tribe Cleradini

- Genus *Clerada* Signoret, 1863
noctua Distant, 1901
 Sarawak: present paper. Sabah: Distant (1901); Malipatil (1982).

- Genus *Dyakana* Distant, 1906
dissimilis (Walker, 1872) (*Lygaeus*)
 Sarawak: Walker (1872).
- Genus *Laticlerada* Malipatil, 1981
muluensis Malipatil, 1985
 Sarawak: Malipatil (1985)
- Genus *Pactye* Stål, 1865
ciconia Stål, 1867
 Sarawak: Stål (1867); Miller (1948, as *Phibalocoris grus* Miller, 1948)
distincta Scudder, 1978
 Sarawak: present paper. Sabah: Scudder (1978)
- elegans* (Breddin, 1901) (*Henricodohrnia*)
 Sarawak: present paper
- izzardi* Scudder, 1978
 Borneo: Scudder (1978)
- Genus *Prehensocoris* Harrington, 1988
indonesensis Harrington, 1988
 Sabah: Harrington (1988)
- Tribe Drymini
- Genus *Borneodrymus* Kondorosy, 2006
gracilis Kondorosy, 2006
 Sarawak, Sabah, Brunei: Kondorosy (2006)
- Genus *Entisberus archetypus* Distant, 1903a
 Sarawak: present paper
- Genus *Heissodrymus* Kondorosy, 2006
bruneiensis Kondorosy, 2006
 Sabah, Brunei: Kondorosy (2006)
- erikae* Kondorosy, 2006
 Sabah, Brunei: Kondorosy (2006)
- magnus* Kondorosy, 2006
 Sarawak: present paper. Brunei, Kalimantan: Kondorosy (2006)
- Genus *Hirtomydrus* Scudder, 1978
trispinosus Scudder, 1978
 Borneo: Scudder (1978)
- Genus *Kanigara* Distant, 1906
oculata Scudder, 1969
 Sarawak: present paper. Brunei: Kondorosy (2006)
- punctata* Scudder, 1969
 Sarawak, Sabah: Scudder (1969)
- Genus *Notochilaster* Breddin, 1907

- Subgenus *Notochilaster* Breddin, 1907
heissi Kondorosy, 2006
 Sarawak, Sabah, Brunei: Kondorosy (2006)
- Subgenus *Parachilaster* Kondorosy, 2006
collaris Kondorosy, 2006
 Brunei: Kondorosy (2006)
- Tribe Lethaeini
- Genus *Diniella* Bergroth, 1893
glabrata (Stål, 1874) (*Dinia*)
 Sarawak: Woodward (1979)
sevosa (Distant, 1901) (*Dinia*)
 Sarawak: present paper
- Genus *Neolethaeus* Distant, 1909
alienus (Walker, 1872) (*Rhynchosoma*)
 Sarawak: Walker (1872)
descriptus (Walker, 1872) (*Rhynchosoma*)
 Sarawak: Distant (1906, as *Aphanus raja*
 Distant, 1906). Sabah: Distant (1904)
tenebrosus (Distant, 1914) (*Lethaeus*)
 Sarawak: Woodward (1963)
- Tribe Lilliputocorini
- Genus *Lilliputocoris* Slater & Woodward, 1979
grossocerata Slater & Woodward, 1982
 Sarawak: Slater & Woodward (1982)
taylori Slater & Woodward, 1982

サラワクにおけるヒヨウタンナガカメムシ科（昆虫綱：カメムシ目）の インベントリー調査およびボルネオ産全既知種のチェックリスト

友国雅章

国立科学博物館の研究プロジェクト「西太平洋における島弧の自然史科学的総合研究」により得られた標本と、サラワク州森林研究センターに保管されている標本を基に、2種の未同定種を含め7族20属27種のサラワク産ヒヨウタンナガカメムシ科を見いだした。うち9種、すなわち *Botocudo yasumatsui*, *Pactye elegans*, *Entisberus archetypus*, *Diniella sevosa*, *Pamerana scotti*, *Paromius pira-toides*, *Stigmatonotum geniculatum*, *Tachytatus prolixicornis*, および *Elasmolomus pallens* はボルネオから初記録であり、7種すなわち *Clerada noctua*, *Pactye distincta*, *Heissodrymus magnus*, *Kanigara ocu-lata*, *Horridipamera nietneri*, *Pamerarma ventralis*, および *Pseudopachybrachius guttus* はサラワク初記録である。この結果、これまでの既知種と合わせてサラワクからは計8族33属57種のヒヨウタンナガカメムシ科昆虫が知られることになった（チェックリスト参照）。この調査が、クバ国立公園とランビルヒルズ国立公園というごく限られた区域で行われたにも拘らず、これほど多数の未記録種が発見されたことは、この科のインベントリー調査がきわめて遅れていることを明白に示している。事実、今回調べた標本の中にはまだ多数の未同定種が残されており、その多くはおそらく未記載種だと思われる。他の地域、とくに山岳部での調査を実施してインベントリーの充実を図ることが今後の大きい課題である。
