(Received 16 June 2017; accepted 27 September 2017)

Abstract As a final paper of a series that reviews adult digeneans (Trematoda) parasitic in freshwater fishes (Osteichthyes) of Japan, this paper presents a list of the papers of the series, a key to the families in Japan, a parasite-host list, a host-parasite list, addenda, and errata.

Key words: Digenea, freshwater fishes, Japan, review, key to families, parasite-host list, host-parasite list, addenda, errata.

Introduction

This is the twelfth (final) paper of a series that reviews adult digeneans (Trematoda) parasitic in freshwater fishes (Osteichthyes) of Japan (Shimazu, 2013). This paper deals with a list of the papers of the series, a key to the families in Japan, a parasite-host list, a host-parasite list, addenda, and errata.

The Introduction, Materials, and Methods for the series were described in the first paper (Shimazu, 2013). The purpose of the series was given in the Introduction. While preparing the series, I wrote a brief review of the adult digeneans known then from Japanese freshwater fishes (Shimazu, 2016e).

List of the Papers of the Series

Shimazu, T. 2013. Digeneans parasitic in freshwater fishes (Osteichthyes) of Japan. I. Aporocotylidae, Bivesiculidae and Haploporididae. Bulletin of the National Museum of Nature and Science, Series A (Zoology), 39: 167–184.

Shimazu, T. 2014a. Digeneans parasitic in freshwater fishes (Osteichthyes) of Japan. II. Gorgoderidae and Orientocreadiidae. Bulletin of the National Museum of Nature and Science, Series A (Zoology), 40: 53–78.

Shimazu, T. 2014b. Digeneans parasitic in freshwater

- fishes (Osteichthyes) of Japan. III. Azygiidae and Bucephalidae. Bulletin of the National Museum of Nature and Science, Series A (Zoology), 40: 167–190.
- Shimazu, T. 2015a. Digeneans parasitic in freshwater fishes (Osteichthyes) of Japan. IV. Derogenidae. Bulletin of the National Museum of Nature and Science, Series A (Zoology), 41: 77–103.
- Shimazu, T. 2015b. Digeneans parasitic in freshwater fishes (Osteichthyes) of Japan. V. Didymozoidae and Isoparorchidae. Bulletin of the National Museum of Nature and Science, Series A (Zoology), 41: 201–216.
- Shimazu, T. 2016a. Digeneans parasitic in freshwater fishes (Osteichthyes) of Japan. VI. Lissorchidae. Bulletin of the National Museum of Nature and Science, Series A (Zoology), 42: 1–22.
- Shimazu, T. 2016b. Digeneans parasitic in freshwater fishes (Osteichthyes) of Japan. VII. Allocreadiidae: *Allocreadium*. Bulletin of the National Museum of Nature and Science, Series A (Zoology), 42: 55–79.
- Shimazu, T. 2016c. Digeneans parasitic in freshwater fishes (Osteichthyes) of Japan. VIII. Allocreadiidae, *Crepidostomum*. Bulletin of the National Museum of Nature and Science, Series A (Zoology), 42: 107–122.
- Shimazu, T. 2016d. Digeneans parasitic in freshwater fishes (Osteichthyes) of Japan. IX. Opecoelidae, Opecoelinae. Bulletin of the National Museum of Nature and Science, Series A (Zoology), 42: 163–180.
- Shimazu, T. 2017a. Digeneans parasitic in freshwater fishes (Osteichthyes) of Japan. X. Opecoelidae, Plagiorchidae. Bulletin of the National Museum of Nature and Science, Series A (Zoology), 43: 1–28.
- Shimazu, T. 2017b. Digeneans parasitic in freshwater

fishes (Osteichthyes) of Japan. XI. Cryptogonimidae and Heterophyidae. Bulletin of the National Museum of Nature and Science, Series A (Zoology), 43: 101–118.

Shimazu, T. 2017c. Digeneans parasitic in freshwater

fishes (Osteichthyes) of Japan. XII. A key to the families in Japan, a parasite-host list, a host-parasite list, addenda, and errata. Bulletin of the National Museum of Nature and Science, Series A (Zoology), 43: 129–143.

Key to the Families in Japan

The known adult digeneans, except Opecoelidae gen. sp. and *Allocreadium* sp., *incertae sedis*, of freshwater fishes in Japan are classified into 15 families in 11 superfamilies (see also a parasite-host list below). The following key is designed to facilitate identification of them to family level but not to show phylogenetic relationships. The serial numbers of the papers that deal with the relevant families are shown in the brackets ([]) after the respective family names.

- Parasitic in circulatory system (heart and blood vessels); oral and ventral suckers absent Family Aporocotylidae [I]
- Parasitic in lymphatic system (lymphatic vessels of connective tissue); oral and ventral suckers present Family Didymozoidae [V]
- Parasitic in urinary system (urinary bladder and ureters); oral and ventral sucker present Family Gorgoderidae [II]
- Parasitic in digestive system (alimentary canal and its associated organs) 1
 - 1.1. Parasitic in air bladder Family Isoparorchiiidae [V]
 - 1.2. Parasitic in alimentary canal and its associated organs other than air bladder 2
 - 2.1. Oral and ventral suckers present 3
 - 2.2. Oral and ventral suckers absent 4
 - 3.1. Tegument spinose 5
 - 3.2. Tegument smooth 6
 - 4.1. Mouth anteroterminal Family Bivesiculidae [I]
 - 4.2. Mouth about midventral Family Bucephalidae [III]
 - 5.1. Genital pore lateral to marginal, at about level of ventral sucker Family Lissorchiidae [VI]
 - 5.2. Genital pore median, in forebody 7
 - 6.1. Genital pore submedian, in forebody Family Opecoelidae [IX, X]
 - 6.2. Genital pore median, in forebody 8
 - 7.1. Testis single, in hindbody Family Haploporidae [I]
 - 7.2. Testes two, in hindbody 9
 - 8.1. Cirrus pouch present Family Allocreadiidae [VII, VIII]
 - 8.2. Cirrus pouch absent 10
 - 9.1. Testes submedian, oblique; ventrogenital sac absent Family Orientocreadiidae [II]
 - 9.2. Testes submedian or lateral, almost symmetrical; ventrogenital sac present 11
 - 10.1. Prostatic sac present; sinus sac absent Family Azygiidae [III]
 - 10.2. Prostatic sac absent; sinus sac present Family Derogenidae [IV]
 - 11.1. Ovary multilobulate; gonotyls present Family Cryptogonimidae [XI]
 - 11.2. Ovary entire; gonotyl absent Family Heterophyidae [XI]

Parasite-Host List

A total of 52 identified and 12 unidentified digenetic species in 26 genera in 15 families in 11 superfamilies, and Opecoelidae gen. sp. and *Allocreadium* sp., *incertae sedis*, are known at present from freshwater fishes in Japan (see also a host-parasite list below). The superfamily, family, generic, and species names of the parasites and the species names of the hosts are arranged in alphabetical order. The serial numbers of the papers of the present review are given in the brackets ([]) after the names of the parasites. The type hosts are also indicated in the parentheses (()) after the names of the hosts.

Superfamily ***Allocreadioidea*** Looss, 1902 [VII–IX]

Family ***Allocreadiidae*** Looss, 1902 [VII, VIII]

Allocreadium aburahaya Shimazu, 2003 [VII]

Phoxinus steindachneri (type host)

Allocreadium brevivitellatum Shimazu, 1992 [VII]

Rhynchocyparis percnurus (type host)

Allocreadium gotoi (Hasegawa and Ozaki, 1926) Shimazu, 1988 [VII]

Gnathopogon elongatus elongatus

Gymnogobius opperiens

Misgurnus anguillicaudatus (type host)

Allocreadium hasu Ozaki, 1926 [VII]

Gnathopogon elongatus elongatus

Nipponocypris temminckii

Opsariichthys uncirostris uncirostris (type host)

Zacco platypus

Allocreadium japonicum Ozaki, 1926 [VII]

Gasterosteus aculeatus leijurus

Nipponocypris temminckii

Phoxinus oxycephalus

Tribolodon brandtii

Zacco platypus (type host)

Allocreadium shinanoense Shimazu, 2003 [VII]

Phoxinus steindachneri (type host)

Allocreadium sp. of Kataoka and Momma (1934), *incertae sedis* [VII]

Plecoglossus altivelis altivelis

Allocreadium sp. of Shimazu (1988) [VII]

Gymnogobius opperiens

Allocreadium sp. of Shimazu (2005) [VII]

Tribolodon hakonensis

Allocreadium sp. of Shimazu (2008) [VII]

Nipponocypris temminckii

Allocreadium sp. of Shimazu, Urabe, and Grygier (2011) [VII]

Tanakia lanceolata

Allocreadium tamoroko Shimazu and Urabe, 2013 [VII]

Gnathopogon elongatus elongatus (type host)

Allocreadium tosai Shimazu, 1988 [VII]

Oncorhynchus mykiss

Rhynchocyparis percnurus

Salvelinus leucomaenis leucomaenis

Tribolodon hakonensis (type host)

Tribolodon sachalinensis

Allocreadium tribolodontis Shimazu and Hashimoto, 1999 [VII]

Tribolodon hakonensis

Tribolodon sachalinensis (type host)

Crepidostomum chaenogobii Yamaguti and Matumura, 1942 [VIII]

Cottus amblystomopsis

Cottus hangiongensis

Cottus nozawae

Gymnogobius opperiens

“*Chaenogobius annularis urotaenia* Hilgendorf” (type host)

Crepidostomum farionis (Müller, 1780) Lühe, 1909 [VIII]

Oncorhynchus masou masou

Oncorhynchus mykiss

Salvelinus fontinalis

Salvelinus leucomaenis leucomaenis

Salvelinus malma malma

Crepidostomum metoecus (Braun, 1900) Braun, 1900 [VIII]

Barbatula toni

Cottus nozawae

Gasterosteus aculeatus

Host-Parasite List

The family, generic, and species names of the host freshwater fishes in Japan (see also the parasite-host list above) are arranged in alphabetical order. Some host fishes are unidentified to species or vague about species. Each species name is accompanied with its authorship and date and its Japanese common name in the brackets ([]). The serial numbers of the papers of the present review are given in the brackets ([]) after the species names of the parasites.

Family Amblycipitidae

Bivesicula sp. of Shimazu (1994) [I]

* BW, CO, OM, and OR indicate four types, or unidentified species, of *Rhinogobius*.

† The exact species names of these fishes are vague at present.

§ This parasite from Shikoku Region has not yet been identified definitively (see also the parasite-host list above).

Addenda

II (Shimazu, 2014a). *Phyllocladum* sp.

Urabe *et al.* (2015) found cercariae of *Phyllocladum* sp. in *Nodularia douglasiae* (Bivalvia, Unionidae) and immature worms of this species in *Cyprinus carpio* from the Yodo River, Osaka Prefecture. They made a morphological and molecular study of the species, but they failed to identify it definitively to species level.

IV (Shimazu, 2015a). *Genarchopsis*: a new cystophorous cercaria

A new cystophorous cercaria was found in *Semisulcospira libertina* collected by Akifumi Ohtaka in an irrigation canal in Nozaki, Ishikawa, Hirosaki City, Aomori Prefecture, on 16 July 2015. This cercaria is morphologically similar to *Cercaria longicerca* Ito, 1953 but molecularly different from it (Misako Urabe, 2015, personal communication).

VII (Shimazu, 2016b). *Allocreadium gotoi*: molecular identification of the cercaria and new locality records

1) Misako Urabe successfully sequenced the cytochrome *c* oxidase subunit I gene of the mitochondrial DNA (COI mtDNA) of adults of *A. gotoi* found in the intestine of *Misgurnus anguillicaudatus* on 28 August 2015 and cercariae found in *Pisidium cinereum nikkoense* on 1 November 2016 both from the small river at Midori, Iiyama City, Nagano Prefecture (see Shimazu, 2016b). Partial COI sequences (889 bp) determined were identical between the adult and the cercaria. Consequently, the cercaria is definitively identified as *A. gotoi*, which supports

Shimazu's (2002, 2016b) morphological identification of the cercaria. She also sequenced the large subunit region of the ribosomal RNA gene (28S rDNA) of adults, and the entire sequence (1274 bp) of the 28S was determined. The GenBank accession numbers of the sequences of the adult deposited by her are: COI sequence, LC215273; and 28S sequence, LC215274.

2) Adults were found in the intestine of *M. anguillicaudatus* collected by Akifumi Ohtaka from an irrigation canal at Nozaki, Ishikawa, Hirosaki City, Aomori Prefecture, on 16 August 2016 (MPM Coll. No. 21297); and fished in the Ishikari River at Ishikari City (obtained by Mitsuhiro Asakawa at a local fish market), Hokkaido, on 5 October 2016 (MPM Coll. No. 21298).

VIII (Shimazu, 2016c). *Crepidostomum*: life cycle

Moravec (2004) found a progenetic metacercaria of *C. farionis* in the body cavity of an unidentified caddis-fly larva (Trichoptera) from the trout brook Vydrí potok in the Šumava Mountains, present Czech Republic, in 1962. Accordingly, it may well be that progenetic metacercariae may occur as well in *C. metoecus*.

IX (Shimazu, 2016d). *Dimerosaccus oncorhynchi*: molecular studies

Bray *et al.* (2016) and Fayton and Andres (2016) also have recently demonstrated that *D. oncorhynchi* belongs to the subfamily Opecoeliinae in their molecular studies.

X (Shimazu, 2017a). *Neoplagioporus elongatus*: life cycle

Yano and Urabe (2017) studied the life cycle of *N. elongatus* in the Uji River, Kyoto Prefecture (see also Shimazu, 2017a).

Errata

I (Shimazu, 2013)

p. 176, left column, between line 14 and line 15 from bottom. Insert "Genus *Bivesicula* Yama-

guti, 1934."

- p. 178, right column, between line 4 and line 5 from top. Insert "Genus *Carassotrema* Park, 1938."
- p. 178, right column, line 11 from top. Delete "(?)."

- p. 2, left column, line 1 from top; and p. 6, left column, line 13 from bottom. Read “[Cercaria T]” for “Cercaria T.”
- p. 8, right column, line 20 from bottom. Read “[Metacercaria IV]” for “Metacercaria IV.”
- p. 8, right column, line 19 from bottom; and p. 11, right column, line 2 from bottom. Read “[Cercaria A]” for “Cercaria A.”
- p. 8, right column, line 18 from bottom; and p. 12, left column, line 3 from top. Read “[Cercaria B]” for “Cercaria B.”
- p. 17, left column, line 15 from top. Read “1943” for “1942.”

VII (Shimazu, 2016b)

- p. 59, right column, line 5 from bottom; and p. 60, left column, lines 17–18 from top. Read “Kouumi” for “Komi.”
- p. 62, right column, line 22 from bottom. Insert “subunit” between “oxidase” and “I.”
- p. 64, right column, line 3 from top. Read “Cuvier in Cuvier and Valenciennes, 1829” for “Linnaeus, 1758.”
- p. 64, right column, line 10 from top. Insert “(Cyprinidae)” between “1872” and “(Shimazu.”
- p. 68, right column, between line 5 and line 6 from top. Insert “*Life cycle*. Not known.”
- p. 72, left column, line 2 from bottom; and p. 72, right column, line 4–5 from top. Read “Asahikita” for “Kamikita-kita.”

IX (Shimazu, 2016d)

- p. 164, left column, line 1 from bottom; p. 166, right column, line 9 from bottom; and p. 168,

- right column, line 10 from bottom. Read “[Gori]” for “Gori.”
- p. 173, right column, lines 5–6 from top. Read “on dorsal side of” for “around dorsal.”

Acknowledgments

I am grateful to Prof. Akifumi Ohtaka (Faculty of Education, Hirosaki University, Hirosaki) for collecting the snails and fish examined, Prof. Mitsuhiro Asakawa (School of Veterinary Medicine, Rakuno Gakuen University, Ebetsu) for obtaining the fish examined, Dr. František Moravec (Institute of Parasitology, Branišovská, Czech Republic) for informing me on the finding of a progenetic metacercaria of *Crepidostomum farionis*, Prof. Misako Urabe (School of Environmental Science, University of Shiga Prefecture, Hikone) for sequencing the samples of *Allocreadium gotoi*, and Dr. Thomas H. Cribb (School of Biological Sciences, The University of Queensland, Brisbane, Australia) for reviewing a draft of the manuscript. Finally, I thank my wife Tomiko Shimazu for serving as assistant to me in the field for many years.
